

Cara

Taking AI Apps & Consumer Products Global · Multiple 0-to-1 Product Builds

cara.liquanqiu@gmail.com

PROFESSIONAL SUMMARY

1. Multiple products taken 0-to-1 into Tier-1 countries and Latin America; strong in product definition and brand-narrative building, integrating PR, organic (SEO, account matrix, influencer partnerships), paid (Meta/TikTok, Search, PMax), and affiliate (CPS) channels to hit market-growth targets.
2. An early adopter of the AI-native way of working: builds automated marketing pipelines with Claude Code / OpenClaw (competitor selling-point mining → ad-angle distillation → creative pipeline production → landing-page generation → data review).
3. Vibe-coding enthusiast who has led AI product design and prototyping — Meitu's viral-video deconstruction & reconstruction system (part-time PM) and an independent side project, a blue-collar local-marketing creative agent — shipping experiments fast with a lean team and leveraging team-level output.

WORK EXPERIENCE

PawLogic | Head of Growth & Operations | Sep 2025 – Present

Consultant-to-full-time · Multiple products taken 0-to-1 into Tier-1 markets

A new incubated product (under NDA)

Owns product definition, overseas brand narrative, and user growth & retention for an Agent community product

- Launch communications: since the June launch, fully owned overseas pre-launch communications — coordinating multi-platform official accounts, mega and mid/long-tail influencers, and PR channels — reaching an estimated tens of millions of impressions across the web.
- Product validation: led seed-user discovery through a Reddit research → posting → comment-reply → paid promotion → Discord DM funnel, acquiring the first 50 users; in parallel, built a Meta creative-testing matrix to validate selling points and formats across audience segments, achieving a US CPI of \$3 and Day-1 retention of 30%.
- UGC loops: combined an account matrix with UGC partnerships — boosting posts and re-editing content — to drive influencer seeding and word-of-mouth referral, scaling seed users and funneling them into a Discord community as a lasting brand asset.
- Results: within two weeks of pre-launch, DAU passed 1,000 with Day-0 retention at 30%; DAU is projected to pass 100K by the end of August.

Drama.Land (AI music video)

Market lead for this AI music-video Agent product, owning advertising, influencer marketing, SEO, official accounts & community, user feedback, and product operations end-to-end

- Product definition: since the February launch, used Reddit research and competitor benchmarking to define the core target audiences, per-audience selling points, marketing channels, and creative formats — and to set user-acquisition channels and budget allocation.
- Paid advertising: working with vendors, owned strategy, creative testing, and data review across the Google ad stack (Search, PMax) and Meta/TikTok — delivering Google ROAS above 0.3 and Meta ROAS approaching 0.8 in real results.
- Influencer partnerships: built the 0-to-1 influencer-collaboration system (including CPS / affiliate revenue-share); combined long-tail KOC collaborations with second-edit paid amplification to compute a blended ROAS, pinpointing which creator types and selling points were worth scaling; planned and ran partnerships with million-follower influencers, managing the full path from impressions → private-channel link distribution → download attribution to optimize CPM and blended ROAS.
- Skill tuning: reverse-mined high-value music sub-genre scenarios from user behavior and led skill tuning across multiple distinct styles; built scenario-based model routing and reverse-engineered the subscription + credit-pack pricing strategy from the gross-margin mix, growing gross margin on the new version.
- Product operations: led onboarding-to-paid A/B testing, bucketing traffic across landing-page variants to find the best landing page and paywall-trigger mechanism per scenario, lifting paid-conversion rate.
- Results: reached USD 1M ARR four months after launch, established a stable and repeatable ad-creative style, and completed negotiations with five bespoke monthly-retainer service clients.

Ops infrastructure

Built lightweight internal tools to raise the team's operating efficiency

- Ad-strategy analysis: built an automated marketing pipeline with Claude Code / OpenClaw, covering competitor selling-point mining → ad-angle distillation → creative pipeline production → landing-page generation → data review.
- Complaint-automation loop: defined a complaint-triage SOP and partnered with engineering to ship the monitoring → triage → SOP-handling flow, closing the loop on customer-complaint automation.

Meitu | Head of Venture Business Operations | Jun 2023 – May 2026

30% global strategy & analysis · 70% operations for Meitu's innovation products

Strategy & Analysis (reporting to the CPO)

- Reported directly to the CPO on overseas strategy and market positioning, delivering: ① a company-level imaging map — an automated system monitoring market share, user scenarios, and usage habits across the design, video, and image verticals (app + web), by country and by competitor — surfacing new-track and opportunity insights for six business units; ② product strategy and GTM design for Meitu (Meituxiuxiu), KaiPai, the Innovation BU, and the Meitu Open Platform; ③ due diligence, post-investment management, and synergy strategy for investments / M&A including Zcool.

Operations Lead (owned revenue targets + overseas go-to-market)

- 2024: owned Vmake's product positioning and selling-point distillation, hitting a ~USD 500K ARR target in one year through organic channels (influencer partnerships, affiliate partnerships, and official-account management); in parallel, mined user feedback and ran user research, turning frontline insight into product features and validating their traction in market.
- 2025: ran operations and overseas integrated marketing for RoboNeo (AI video Agent) and MVLAND (AI music) in parallel, personally carrying the revenue target and building a ~4-person AI-native team per product for fast decision-making. The work covered:
- Product definition: starting from product definition and core selling-point distillation, produced the full set of external launch materials.
- Paid advertising: partnered with the central channel team to build the Google and Meta ad stack, testing different selling points and creatives to find high-ROAS angles and formats.
- Influencer partnerships: ran a mega + UGC hybrid model — mega-influencer exposure, mid/small-creator re-edits, and boosted re-edits — delivering tens of millions of impressions and ~100K daily active users.
- Community: orchestrated overseas social (Twitter/X, LinkedIn, TikTok) and the Discord community; hosted multiple community challenges that contributed 200+ online templates within two months.
- SEO: owned the product SEO strategy, supporting product-structure and performance optimization and contributing tool and template designs from an operations perspective to raise the organic-traffic share.
- EDM: identified potential small-B users within the user base and deployed OpenClaw to provide varied reply templates, lifting open rates and close rates.

Results

- RoboNeo hit #1 on iOS category charts in 10+ countries in 2025, and #1 on Brazil's overall chart.
- MVLAND became the fastest-growing product by ARR in Meitu's Innovation BU (ARR approaching USD 500K by the time of departure).

AI Creative System | Product Manager | Dec 2025 – May 2026

A side project led as a part-time product manager during Meitu, building viral-video deconstruction & reconstruction

- Background: solved the overseas ad team's creative-production bottleneck — each creative took 2 hours by hand, too slow for the every-3-days refresh cadence, so the team kept missing trend windows and delivery costs rose; owned the build of an AI system to deconstruct and reconstruct winning ad videos so overseas delivery could respond fast to the market.
- Product planning: ① Needs discovery — mapped the overseas ad team's workflow and identified two core pains: a fragmented process with tool-switching and manual hand-offs, and uncontrollable AI generation with frequent rework. ② Path definition — surveyed 10+ AIGC creative tools, defined the product path (deconstruct → slot replacement → shot editing → video output) and a dual-mode architecture (fixed workflow + Agent-driven node canvas); assessed leading video/image models and set a Gemini + Seedance multi-model strategy.
- Solution design: ① Semantic architecture — a four-layer semantic architecture (theme / narrative / shot / execution) and a three-state structure (original / abstract / rewritten) for immutable data, reusable templates, and traceable edits; identity anchors + asset-slot mechanisms for shot consistency and local replacement. ② Agent architecture — a three-layer Agent loop (task scheduler auto-orchestrating execution, node executors mapped to business functions, LLM decision points for minimal-workflow planning, multi-dimensional evaluation, and retry-strategy adjustment); gate approvals, A/B branch comparison, and editable nodes for an "Agent-driven, human-in-the-loop" canvas. ③ Prompt engineering — 15+ meta-prompt templates pipelined across four stages, with structured input/output per stage supporting cross-stage asset reuse/replacement and bad-case root-cause tracing.
- Delivery: ① Prototype built on FastAPI, Next.js, and React 19. ② Evaluation/iteration — a QA checklist (5 categories, 18 checkpoints) and a human-in-the-loop testing system; iterated on bad cases: abstracted visual noise into overwrite slots for full asset coverage when inpaint repair was unstable; built a generate/merge/stylize three-way judgment system for invalid generation and missing output on non-narrative shots; merged serial calls into a single matrixed analysis for multi-entity latency, cutting time from 10 minutes to 40 seconds.
- Outcome: through connected pipelines and a controllable architecture, freed ~40% of manual effort (human fine-tuning is still needed given the "gacha" randomness of AI generation), enabling 60 new creatives shipped per week.

ByteDance | Senior Strategy Manager | Dec 2020 – Jun 2023

Business analytics · Foundation project sourcing & investment management

- Business analytics: joined in 2020 in a business-analytics role and built a 5-person team covering business analysis for ad monetization and ad review, focused on growing ad revenue and improving review efficiency.
- CSR initiative: to strengthen ByteDance's CSR record and reduce platform-safety risk on Douyin, led AI product innovation for TikTok's mental-wellness initiative — reaching 100,000+ users with identification, early warning, intervention, and referral for acute psychological risk, and reducing the share of high-risk speech and extreme incidents on the platform.

- Foundation relations: managed an executive's personal philanthropic fund, leading sourcing, investment, and post-investment management for AI health & safety and frontier-medical projects — landing three education projects and completing the sourcing and industry-academia partnership for one medical project.

New Oriental | Head of Business Analytics | Oct 2019 – Nov 2020

User Growth · Acquisition & Conversion · Multi-platform Operations

- Orchestrated growth across user, teacher, and sales sides, building a full-funnel performance system and lifting conversion rate by 20%.
- Built a machine-learning user-segmentation model (random forest, 85%+ accuracy) for precise targeting; optimized budget utilization to 80% through forecasting.

Alibaba (Ele.me) | Business Analytics Manager | Jan 2019 – Sep 2019

Supply-Side Growth · Merchant Acquisition · Market Share Expansion

- Drove merchant-side supply growth across a two-sided marketplace; managed a RMB 10 million subsidy program across 15+ provinces, increasing merchant count by 4.5% and raising national market share by 12%.

DiDi | Regional Operations Manager | Melbourne / Tokyo / Latin America | Jan 2017 – Dec 2018

Regional Operations · Customer-Service System Build · Driver-Side Growth

- Led the rollout of the customer-service product across Australia/New Zealand, Brazil, and Mexico.
- Built the full customer-service system for Spanish-speaking markets end-to-end — vendor selection, staff training, and performance evaluation.
- Drove driver-side operations and penetration growth across Australia and New Zealand.

Accenture | Senior Business Analyst | Apr 2013 – Dec 2016

Market Entry & Growth · Strategic Planning · Digital Transformation

- Led market-entry and expansion projects for enterprise clients (China Post, China Resources), delivering strategic roadmaps.

SIDE PROJECT

US Blue-Collar Local Marketing Creative Agent (LocalAd Studio) | Independent build · Claude Code · 2026

- Built an AI creative-production agent for US blue-collar / home-service local advertising (plumbing, HVAC, cleaning, moving): deconstruct winning local-service ads → slot replacement (city / service / season) → shot & copy editing → composited output; four-layer semantic architecture + identity anchors / asset slots + multi-layer production orchestration (gate approvals, A/B variants, editable nodes) + 15+ meta-prompt templates, prototyped on Claude Code + FastAPI / Next.js.
- Outcome: lifted creative output from ~8 pieces per person per day to hour-level batch production, freeing ~80% of manual effort and supporting high-frequency local-ad creative needs across many cities and services.

EDUCATION

The University of Melbourne | Master of Information Systems (Minor in Finance) | 2010 – 2012

Huazhong University of Science and Technology | Bachelor of Electronic and Information Engineering | 2006 – 2010

SKILLS & LANGUAGES

Core Competencies: Overseas Integrated Marketing (IMC) · Brand Narrative & PR · Influencer/KOL & Affiliate Programs (0-to-1) · Social Matrix & Community (Reddit/Discord) · Performance Marketing · Data-Driven Decision-Making · Cross-Functional & Cross-Border Team Management

AI & Tools: Claude Code · OpenClaw · Workflow Automation · AI Agent Product Operations · ML User Segmentation (Random Forest)

Languages: Chinese (Native) · English (Fluent, working language) · Spanish (Learning)
